

Native Android Mobile App Developer

MOBILE APPLICATION ENGINEER

Delhi NCR / Remote mobile.android.eng@gmail.com

— linkedin.com/in/mobile-android-developer

EXPERTISE

Android SDK (Java & Kotlin)

Offline Caching & Room DB

SQLite Database management

Asynchronous Coroutines & LiveData

REST API Client consumption

Retrofit & OkHttp networking

Material UI / Custom Views

Background Services & Intents

Git & version control

Java Spring Boot & REST APIs

PostgreSQL storage solutions

Gradle Build Automation

EDUCATION

Bachelor of Technology (B.Tech)

Indian Institute of Technology (IIT
ISM) Dhanbad

PROFESSIONAL SUMMARY

A highly focused and creative Native Android App Developer with a solid understanding of structural patterns (MVVM, Clean Architecture), offline indexing systems, REST API communications, and mobile memory footprint optimization. Skilled in designing intuitive, smooth user experiences utilizing Material UI specifications, and writing reliable offline companion systems utilizing SQLite Room DB.

PROFESSIONAL EXPERIENCE

Lead Systems & Integration Engineer

June 2025 -
Present

Freelance / Self-Employed

- Developed a high-availability, direct multi-channel data ingestion system in Python supporting API links across major social networks and email systems.
- Engineered a direct native WebSocket message sync layer, establishing a local database cache store in Postgres and reducing external operations dependencies.
- Deployed long-polling Odoo Bus hooks to stream dynamic alerts in real-time to active user screens.
- Built containerized backend networks using Docker Compose to ensure absolute environment replication.

Java & Android Developer

June 2024 - May 2025

Enterprise Software Solutions

- Designed and programmed native Android applications using Kotlin, Java, and Android Studio, integrating Room DB for persistent local storage.
- Integrated secure REST clients utilizing Retrofit, custom token interceptors, and strict network latency monitoring.
- Contributed to the design of secure enterprise backend microservices based on Spring Boot and PostgreSQL, decreasing overall transactional overhead.

KEY PROJECTS

Offline-First Companion App

A native Kotlin application implementing MVVM pattern, Room DB for caching, custom work managers for background data sync, and dynamic charts for telemetry reporting.
