

Backend Spring Boot & Microservices Engineer

SENIOR SOFTWARE ENGINEER

📍 Delhi NCR / Remote ✉️ backend.spring.engineer@gmail.com

🌐 — linkedin.com/in/backend-spring-engineer

EXPERTISE

Java 17+ & Spring Boot

Spring Cloud & Microservices

Service Registry (Eureka)

Spring Security & OAuth2

RESTful Web Services

PostgreSQL & database tuning

Query Optimization & Indexing

Docker & Containerization

Asynchronous Event Streams

RabbitMQ & Kafka

CI/CD & Git/GitHub

Python & Odoo Backend

EDUCATION

PROFESSIONAL SUMMARY

A results-oriented Backend Software Engineer specialized in designing, deploying, and maintaining high-availability microservices architectures. Extensive experience in optimizing PostgreSQL databases, writing secure Rest APIs, managing transactional safety, and deploying scalable distributed systems using Docker. Passionate about engineering efficient solutions that support high-volume transaction processing and low-latency API networks.

PROFESSIONAL EXPERIENCE

Lead Backend & Systems Integration Developer June 2025 - Present

Freelance / Self-Employed

- Architected and built a multi-channel secure webhook routing engine in Python, consolidating communications across major platforms (WhatsApp, Facebook Pages, Instagram Graph, Gmail API).
- Designed a clean, self-hosted WebSocket WhatsApp manager, bypassing meta cloud verification dependencies and eliminating official transactional fees.
- Engineered Odoo backend hooks utilizing the platform's bus system to establish websocket long-polling pathways for real-time sales alert notifications.
- Managed continuous deployment pipelines via multi-container Docker structures and optimized Postgres storage

Bachelor of Technology**(B.Tech)**

Indian Institute of Technology (IIT
ISM) Dhanbad

backends for session data.

Java & Android Developer

June 2024 - May 2025

Enterprise Software Solutions

- Architected resilient backend microservices utilizing Java 17, Spring Boot, Spring Cloud (Eureka, API Gateway), and PostgreSQL.
- Designed secure RESTful APIs integrating Spring Security with JWT token authentications and database connection pool tuning.
- Reduced general database API response latency by 35% through query profiling, selective indexing, and vacuum optimization.
- Programmed native mobile companion clients with Java/Kotlin and Android SDKs, incorporating SQLite Room framework for persistent offline data.

KEY PROJECTS

Distributed Microservices Core

A multi-service platform using Eureka registry, Spring Cloud Gateway, Config Server, and rabbitmq messaging, handling secure transaction routing and high concurrent loads.
